

Judge C.R. Magney State Park

Summer Visitor Survey

Survey Dates:

July 15 - August 3, 2015

Number of Visitors Surveyed:

1398 North Shore Visitors

42 Magney Visitors

Project Overview:

A changing climate can impact recreation and tourism. We wanted to know how current visitors to Minnesota's North Shore think changing conditions will change their future travel plans.

Trip Characteristics

Current Trip Length:

North Shore: 4 nights

Magney: 5 nights

of Summer 2016 Trips:

North Shore: 2 trips

Magney: 2 trips

Average
Group
Size
3
people

Who Visits?

North Shore:

56% female

55% age 45 or older

66% from Minnesota

Magney:

55% female

45% age 45 or older

66% from Minnesota

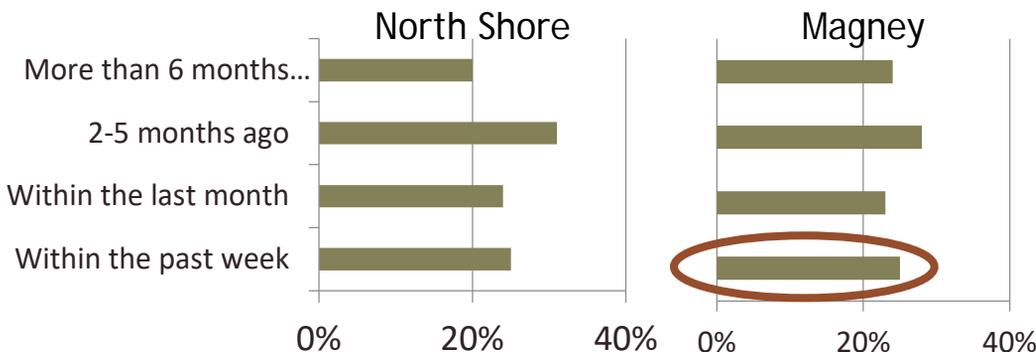

of years participants
have been visiting
the North Shore:

North Shore: 16 years

Magney: 16 years

57% of Magney visitors agree that "The North Shore is part of my identity."

When did they plan their trip?

1/4

of visitors
plan their trip
spontaneously.

How might changing environmental conditions alter visitors' travel plans?

Judge C.R. Magney State Park
Summer Visitor Survey

We presented visitors with *recent* and one of four different sets of *potential* future conditions and asked them how many trips in the summer if the future conditions were what was to be expected instead of the current conditions.

% of days in a month	Recent	Future
above the avg. temperature (60°F)	15 of 30 days	19 of 30 days
above the avg. heat index (66°F)	14 of 30 days	20 of 30 days
with 'high,' 'very high,' or 'extreme' fire risk	5 of 30 days	6 of 30 days
with greater than ¼" rainfall	5 of 30 days	4 of 30 days
% of inland streams	Recent	Future
with brook trout	77%	20%
with small mouth bass	53%	58%

If the conditions on the North Shore matched the *potential future* conditions, **Magney** visitors report they would make, on average, two recreational trips to the region each summer.

If faced with the *potential* future conditions, **Magney** visitors said that they would:

In general, **Magney** visitors felt that the potential future conditions would have **little impact** on their *Personal Safety* or *Recreation, Nature & Tourism* on the North Shore.

Visitors were asked to consider an opportunity to contribute to a fund (public or private) for a North Shore organization to plan and adapt recreation and tourism resources to climate change...

37% of all visitors & **23%** of Magney visitors

would be willing to pay \$30 annually for a climate change adaptation fund.

This work is the result of research sponsored by the Minnesota Sea Grant College Program supported by the NOAA office of Sea Grant, United States Department of Commerce, under grant No. R/CC-05-14. The survey was developed & administered by researchers (faculty, graduate students & undergraduate students) at NC State University, the University of Minnesota, & Carleton College. This fact sheet was developed by Allie McCreary & Erin Seekamp (NC State University) on July 25, 2016.
